

DL 9084

Domtar's Enterprise Group, the leader in providing rolls of high quality uncoated paper for the high speed digital transactional market, has added DL 9084, a top quality coated ink-jet coated paper manufactured by Mitsubishi HiTec Paper, to its line-up.

DL 9084 was developed for high speed two-sided printing on the ink jet systems of leading OEM's, including Océ, Kodak, InfoPrint and Screen. It is compatible with common dye, pigment and UltraChrome (K3) inks, and suitable for offset pre-printing. The special matte coating on both sides of the paper provides high ink absorption capacity, excellent drying performance and wipe resistant results. Combined with high brightness and a blue white shade, this gives great line sharpness, superior image density and excellent color reproduction. In addition to superb print quality, DL 9084 offers flawless performance on high speed pre-and post press processing and finishing equipment.

DL 9084 is designed for targeted marketing applications and personalized correspondence featuring photos, full color graphics, company logos and product information. It is available from Enterprise Group in unprocessed and processed rolls (perfed or punched).
